# Vietnam Coins in the Fitzwilliam Museum, Cambridge

## Shunji Ouchi\*, Shin-ichi Sakuraki\* and Mark Blackburn\*\*

### 1. Introduction

This is the third paper in our series on the Collection of Far-Eastern Coins in the Fitzwilliam Museum, Cambridge University. The first paper (Sakuraki and Blackburn 2001) reported on Japanese Coins, the second (Ouchi, Sakuraki and Blackburn 2007) discussed Chinese Coins and this paper will consider the Vietnamese Coins in the Fitzwilliam Museum collection.

From the 10th century in Vietnam, under Chinese influence, round coins with square holes were minted. It is well known that coins were in circulation in Vietnam from the 16th to the 17th centuries, just as they were in Japan and the Korean Peninsula. The first known official Vietnamese coinage is thought to have come from the time of the Dinh Dynasty, around 970-979 AD. In 970, Dinh Bo Linh adopted the reign title of Thai Binh and issued coins with the inscription Thai Binh Hung Bao (太平興寳).

In Japanese Numismatic society, the pioneering three-volume work by Miura Gosen. "Annam Sempu (安南泉譜)" (Gosen 1966) stands out as one of the most complete and accurate works on Vietnamese coins to date. Recently, research on Vietnamese coins is being conducted throughout the world, and a number of useful collections have been pub-

lished, such as "The Historical Cash Coins of Viet Nam" (Barker 2004), which presents particularly valuable information on Vietnamese coins, and "Catalogue des monnaies viet namiennes, Supplément" (Thierry 2001).

Sakuraki and Ouchi conducted a systematic screening of hoards in Hanoi in September, 2007. This was the first archaeological coin survey by Japanese scholars in Vietnam, which joined research started by Dr Miyake Tosihiko in March, 2006 (Miyake 2006). Vietnamese coins such as Thien Phuc Tran Bao 天福鎮寳 (first issued in 980) and Dai Tri Thong Bao 大治通寳 (first issued in 1358) have very occasionally been found mixed up with medieval coins excavated in Japan. But, there are very few opportunities to observe Vietnamese coins in person in Japan, which is a disadvantage for scholars interested in conducting their own surveys in Vietnam. One way to overcome this barrier is to conduct a detailed examination of coinage available at museums. Through this, one can develop a discerning eye for coins, and the comparatively sound condition of coins stored in museums further facilitates this endeavor. As such. Sakuraki and Ouchi decided to take the opportunity to personally examine the coin collection at Fitzwilliam Museum, at which we have been conducting joint research since 2001, with the intention of exploiting this new-found knowledge and experience in future field trips

in Vietnam.

## 2. Vietnam cash coins

Ouchi and Sakuraki observed the Vietnam coin collection at Fitzwilliam Museum in July and September of 2007, thanks to the assistance of Dr Mark Blackburn. As of September 2007, the Fitzwilliam Museum holds 126 Vietnamese cash coins, which are composed of 50 types of coins, as shown in Table 1. When cataloguing the coins we mainly referred to Barker (2004). When specific coins were not listed in Barker (2004) we used Thierry (2001) and Novak (1989). There were some copies of Chinese cash coins and coins issued in unknown reigns (No.100-119) in the collection. However, here we provide a description of all coins in chronological order.

No 1. Thai Bing Hung Bao (太平興寶): This coin is the first in the official series of the Annamese dynastic coins. On the reverse above the hole is the character Dinh [丁] which is the name of the dynasty which lasted briefly from 968-981. It seems to have been ground in later centuries and the outer rim edges on the reverse side are worn. On the obverse above the hole is the character Thai (which appears as [大] not [太]). The metal seems to have a high copper content.

No 2. Thien Phuc Tran Bao (天福鎮寶): On the reverse above the hole is the character Le [黎].

No 3. Can Phu Nguyen Bao (乾符元寳): The diameter is small at 21.2mm. The metal seems to have a high copper content.

Nos 4-5. Dai Dinh Thong Bao (大定通寳): There are two coins of this type. One has a slightly large diameter at 22.4 mm and the other has a slightly small diameter at 21.0 mm. The reverse of both have been ground.

No 6. Thien Khanh Thong Bao (天慶通賓): There are gas holes between the characters Thien [天] and Khanh [慶] which suggest that a miss run(a casting that is not completely filled with metal) occurred. The metal seems to have a high copper content.

No 7. Thieu Binh Thong Bao (紹平通寶): This is a well-made coin.

Nos 8-9. Thai Hoa Thong Bao (大和通寶): There are two of this type of coin. No 8 is small with a diameter of 20.3mm. It also seems to have a high copper content. No 9. is a well-made coin.

No 10. Dien Ninh Thong Bao (延寧通寶) and No 11. Quang Thuan Thong Bao (光順通寶): Both of these coins are well-made.

Nos 12-13. Hong Duc Thong Bao (洪徳通寳): There are two of this type of coin. One has some green patina growth which suggests it has a high copper content. Some parts of the characters have been worn, and the character engravings are not as crisp as the other coin.

No 14. Vinh Dinh Thong Bao (永定通寶): This coin has a small diameter at 21.7 mm and is not thick. It has some green patina growth which suggests a high copper content. No 14 is of the same size and seems to have been made of the same material as No 3 (Can Phu Nguyen Bao [乾符元寶]) and Nos 8-9 (Thai Hoa Thong Bao [大和通寳]).

No 15. Canh Thong Thong Bao (景統通寳): This is a well-made coin and is 1.9 mm thick.

No 16. Doan Khanh Thong Bao (端慶通寳):

This coin is 2.6 mm thick and well made.

No 17. Hong Thuan Thong Bao (洪順通寳): This is also a well-made coin.

Nos 18-21. Tuong Phu Nguyen Bao (祥符元 實): There are four coins of this type. The characters found on No 18 are similar to characters used in coins made during the Northern Song Dynasty (960-1127), and its diameter is rather small at 22.9 mm. However, it is thin and seems to be made of brass. Furthermore, on the left side of the reverse, the character Nguyen [元] has been inscribed at a 90 degree rotation to the left.

No 22. Tri Binh Thong Bao (治平通寳): This coin has brass colorings and has a diameter of 24.7 mm.

Nos 23-24. An Phap Nguyen Bao (安法元寶): The reverse of No 26 is flat and is of a whitish color. The reverse of No 27 is barely decipherable. We can identify the outer and inner rims, however, whether it is because it is ground or not is uncertain, but the reverse is almost flat. Moreover, only Nguyen [元] of An Phap Nguyen Bao [安法元寶] is of seal script.

No 25 Thai Binh Thanh Bao (太平聖寶): This coin has a small diameter at 21.7 mm, and is not thick.

Nos 26-27. Vinh Tho Thong Bao (永壽通寶): There are two coins of this type. The characters of both are not clearly defined, perhaps due to imperfections in the mold, and the rim and outer rim on the reverse are not crisp.

Nos 28-41. Thai Binh Thong Bao (太平通寶): There are 14 coins of this type. There is one or two stars inscribed on the reverse of several of these coins. Moreover, there are two coins not

listed in Barker (2004) which have a distinctive version of the character Binh [平] inscribed on the reverse.

Canh Hung (景興) coins were minted in Vietnam in 1740-1776 and have more basic variants than any other Annam royal issue, or indeed any official coin of one reign in East Asian history.

Nos 42-61. Canh Hung Thong Bao (景興通寳): There are 19 coins of the Canh Hung Thong Bao type in the collection. On the left of the reverse of one of them is the character Tu [四] and on the right is the character Siu [小]. This coin is not described in Barker (2004). In addition, there are other coins which contain characters on the reverse. Overall, there are many coins of this type which seem to have a high copper content. No 42 has Canh Hung Thong Bao [景興通寳] engraved on both sides. This coin has brass colorings and is rather thin. There are also five coins (Nos 51-55) which feature characters engraved in seal script. There is one coin which seems to have been engraved using regular script. In addition, there are 4 coins (Nos 62-65) of the Canh Hung Cu Bao type (景興巨寳) and 2 coins (Nos 66-67) of the Canh Hung Tuyen Bao type (景興泉寶). The character Hung 「興] on Nos 66 and 67 has been engraved differently to the other coins of the Canh Hung type. There is one coin each of the Canh Hung Trong Bao type (景興重寳) and Canh Hung Vinh Bao type (景興永寳), Nos 68 and 69 respectively. Moreover, there are two coins (Nos 70-71) of the Canh Hung Dai Bao type (景興大寳) and one (No 72) of the Canh Hung Thuan Bao type (景興順寶).

No 73. Thien Minh Thong Bao (天明通寳): This is a well-made lead coin.

Nos 74-75. Chieu Thong Thong Bao (昭統通

寶): There are two coins of this type. Both are brass coins. One has the character San [山] and the other the character Trung [中] engraved on the bottom of the reverse.

Nos 76-77. Thai Duc Thong Bao (泰德通寳): Both of these coins have been ground on the reverse.

Nos 78-85. Quang Trung Thong Bao (光中通寶): There are eight coins of this type. Of these coins, there is one with the characters Annam [安南] engraved on the reverse. Two have a floral design engraved on the reverse.

Nos 86-92. Canh Thinh Thong Bao (景盛通 寶): There are seven coins of this type. The inside of the outer rim of one of them is rather distinctive.

No 93. Can Long Thong Bao (乾隆通寶): This is a silvery coin. On the reverse is the character Annam [安南].

Nos 94-100. Gia Long Thong Bao (嘉隆通寶): There are seven coins of this type. Three are lead coins. Others are thin and of brass. Thus, it seems that this type of coin is not standardized. There are two coins which have the character Luc Phan [六分] on the reverse.

Nos 101-104. Minh Mang Thong Bao (明命通 寶): There are 4 coins of this type. One of them has a diameter of 25.9 mm which is rather large. There are also small coins with a diameter of 21.8 mm.

No 105. Tri Nguyen Thanh Bao (治元聖寶) has a diameter of 23.8mm and No 106 Tri Nguyen Thong Bao (治元通寶) has a diameter of 22.3mm, which is rather small. Both are not thick.

No 107. Nguyen Long Thong Bao (元隆通寳):

This coin is thin and has a diameter of 22.2 mm, which is rather small.

No 116. Thanh Thai Thong Bao (成泰通寳): This coin has a large diameter at 26.2 mm, and on the reverse is the character Tap Van [十文].

No 117. Khai Dinh Thong Bao (啓定通寶): We can only just confirm the outer rim and inner rim of this coin as it has been ground and is flat.

No 118. Chi Dao Nguyen Bao (至道元寶): The character Dao [道] is rather distinctive, and has places which look like the character "K". It is thin and seems to be a brass coin.

No 119. Thieu Thanh Nguyen Bao (紹聖元寶): This coin is of bronze coloring.

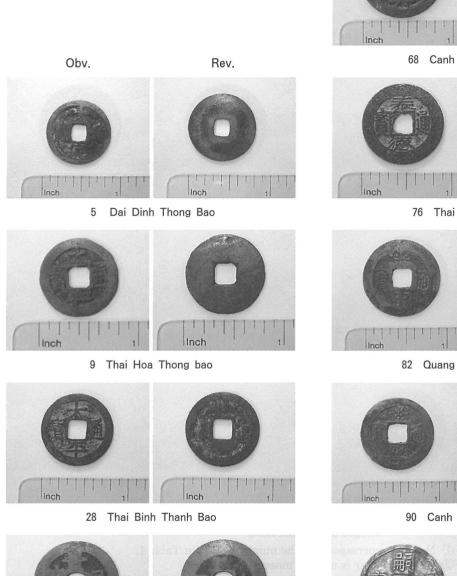

Nos 120-122. Van Lich Thong Bao (萬曆通寳): There are three coins of this type. One has the character [分] engraved on the right side of the reverse. The other two have the character Ly 「厘] engraved on the right side of the reverse.

No 123. Thanh Tong Nguyen Bao (聖宋元寶): The characters inscribed on this coin are in seal-script, and it has a diameter of 22.9 mm. The character Thanh [聖] looks like the character [崖] and is quite distinctive.

No 124. Yuan You Tong Bao (元祐通寳): Compared to coins of the Northern Song Dynasty this coin is thin and of bronze coloring. The reverse has been ground.

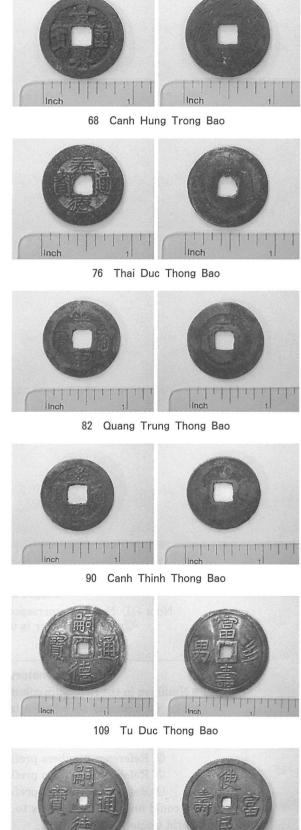

No 125. Phuc Binh Nguyen Bao (福平元寶): The characters inscribed on this coin are in seal-script, and it is of bronze coloring. This coin is not listed in Barker (2004).

No 126. Tri Binh Thanh Bao (治平聖寶): This is a brass coin with a 20.4 mm diameter, which is rather small. The reverse has been ground and is flat.

## Images of selected coins

- Note: ① Numbers correspond to the numbers used in Table 1.
  - ② An Inch Ruler is used to measure the coins.

#### Explanatory notes for Table 1

- Numbers in the Reference column are the catalogue numbers used in the books we referred to when categorizing the Vietnamese coins in the Fitzwilliam Museum:
  - ① Purely numerical entries indicate Barker (2004).
  - ② Reference numbers prefixed by TS indicate Thierry (2001).
  - ③ Reference numbers prefixed by T indicate Thierry (1987).
  - 4 Reference numbers prefixed by N indicate Novak (1989).

We could only find references to coin No 108 in the Standard Catalog of World Coins 1801-1900.

• In regard to Metal Codes, in compliance with the customs of the European Numismatics Society, coins made of brass alloy are referred to as AE and coins made of silver are referred to as AR.

<sup>\* &</sup>quot;Standard Catalog of World Coins 1801-1900", p.1119

In table 2, the information in table 1 has been rearranged into chronological order. As you can tell by this table, there are no references to coins from reigns such as Ho Dynasty (胡朝), Tran Dynasty Restored (後陳) and The Trinh Lords (王鄭). In order to supplement its collection with coins from these dynasties, from the end of September to October 2007, the Fitzwilliam Museum added

76 new Vietnamese coins to its collection. We have personally examined these new coins, and will release our findings in a future paper.

Table 2 Chronological list of coins catalogued

| Vietnamese reign title   | Type                          | No. of coi |

## 3. Closing Remarks

As a result of our observations of Vietnamese coins, we can say that one feature of coins made from the 18 th century onwards is that they are comparatively thin. Whether it is because of the way they were finished or not is uncertain, but the reverse of many coins have been ground. The Vietnamese coin collection in the Fitzwilliam Museum is not as vast as the substantial European coin collection, but the fact that we were able to actually touch and observe the coins ourselves will no doubt assist us in our future fieldworks in Vietnam. We thank the staff of the Department of Coins and Medals, Fitzwilliam Museum, for their kind assistance.

This research was supported by A Research Encouragement Grant from Shimonoseki City University.
